

## **Salmen Tech Co. introduces a new outstanding product for fuel / oil spills and clean up.**

I hope this e-mail gets to you; I would like to give you a story idea. **MOP Environmental Solutions, Inc.**, introduces a patented breakthrough absorbent material called **MOP® (Maximum Oil Pickup®)** It's all natural and made with hydroelectric power so it's green from the get go. It's also accepted by the EPA.

We have a plan for oil companies to put our MOP CANNONS on their oil rigs along with a stock pile of **MOP®** so when there is a spill **THEY** can quickly neutralize all the harmful effects in minutes rather than days. Also the shipping industry will benefit greatly from this process as well, using the same technique.

- **MOP®** is 100% biodegradable, non-toxic, non-irritating, and is safe to plants and animals.
- **MOP®** is a hydrophobic absorbent, treated to be fire retardant; its unique fiber shape maximizes the absorption capacity 30:1
- **MOP®** has a traction restoring grit that does not interfere with flotation or oil absorption.
- **MOP®** picks up, controls, and remediates, at the lowest cost, all types of oil spills.
- **MOP®** offers superior absorbent performance with a patented formula and bio-remediation option that is unique and stands alone in today's marketplace.

### **Offers a low cost oil recovery option!**

Remarkably clean oil can be recovered from the oil-saturated **MOP®**. You can extract, salvage, and re-use up to 95% of the absorbed oil. **MOP®** actually cleans the oil so it is available for use without contamination by water or debris. The remaining 5% **MOP®** material can be burned to recover 100% of the available energy, while leaving as low as 0.1% ash. **MOP®**. A bio-remediation option allows **MOP®** to be gathered in drums for remediation by the oil-digesting microbes and nutrients.

### **MOP® works both on land and water.**

**MOP®** works equally as well in rain or sleet, and picks up oil spills on wet or dry land, snow, ice and water. Once **MOP®** is applied, the oil will not leach out. **MOP®** is designed for optimum performance on each and every surface where oil spills can occur.

### **MOP® works equally well everywhere.**

**MOP®** is so unique, it's patented. Once **MOP®** is thoroughly applied to an oil spill it halts further contamination of land and/or water. The aggressive oil-holding action enables **MOP®** to keep its grip on the oil and thus clean the environment.

**I hope that you will go to our website and watch the videos and contact me with any questions.**
